

Epidemiology Series

Outbreak Epidemiology

Outbreak Epidemiology is a blended course of both online curriculum and an in-person workshop. The online curriculum and workshop cover basic information on infectious disease epidemiology, the reasons why outbreaks are investigated, and the reporting of disease in Arizona.

Learning Objectives:

- Describe ways in which epidemiologists may determine that an outbreak is occurring.
- List the common modes of transmission associated with infectious diseases.
- Outline the different goals of an investigation depending on the stage of the outbreak.
- List the five reasons for investigating an outbreak.
- 5. Detail the steps in conducting an outbreak investigation.
- Describe how and why diseases are reported in Arizona.
- List the three groups responsible by law, to report disease in Arizona.
